The Problem with Reopening Schools

1

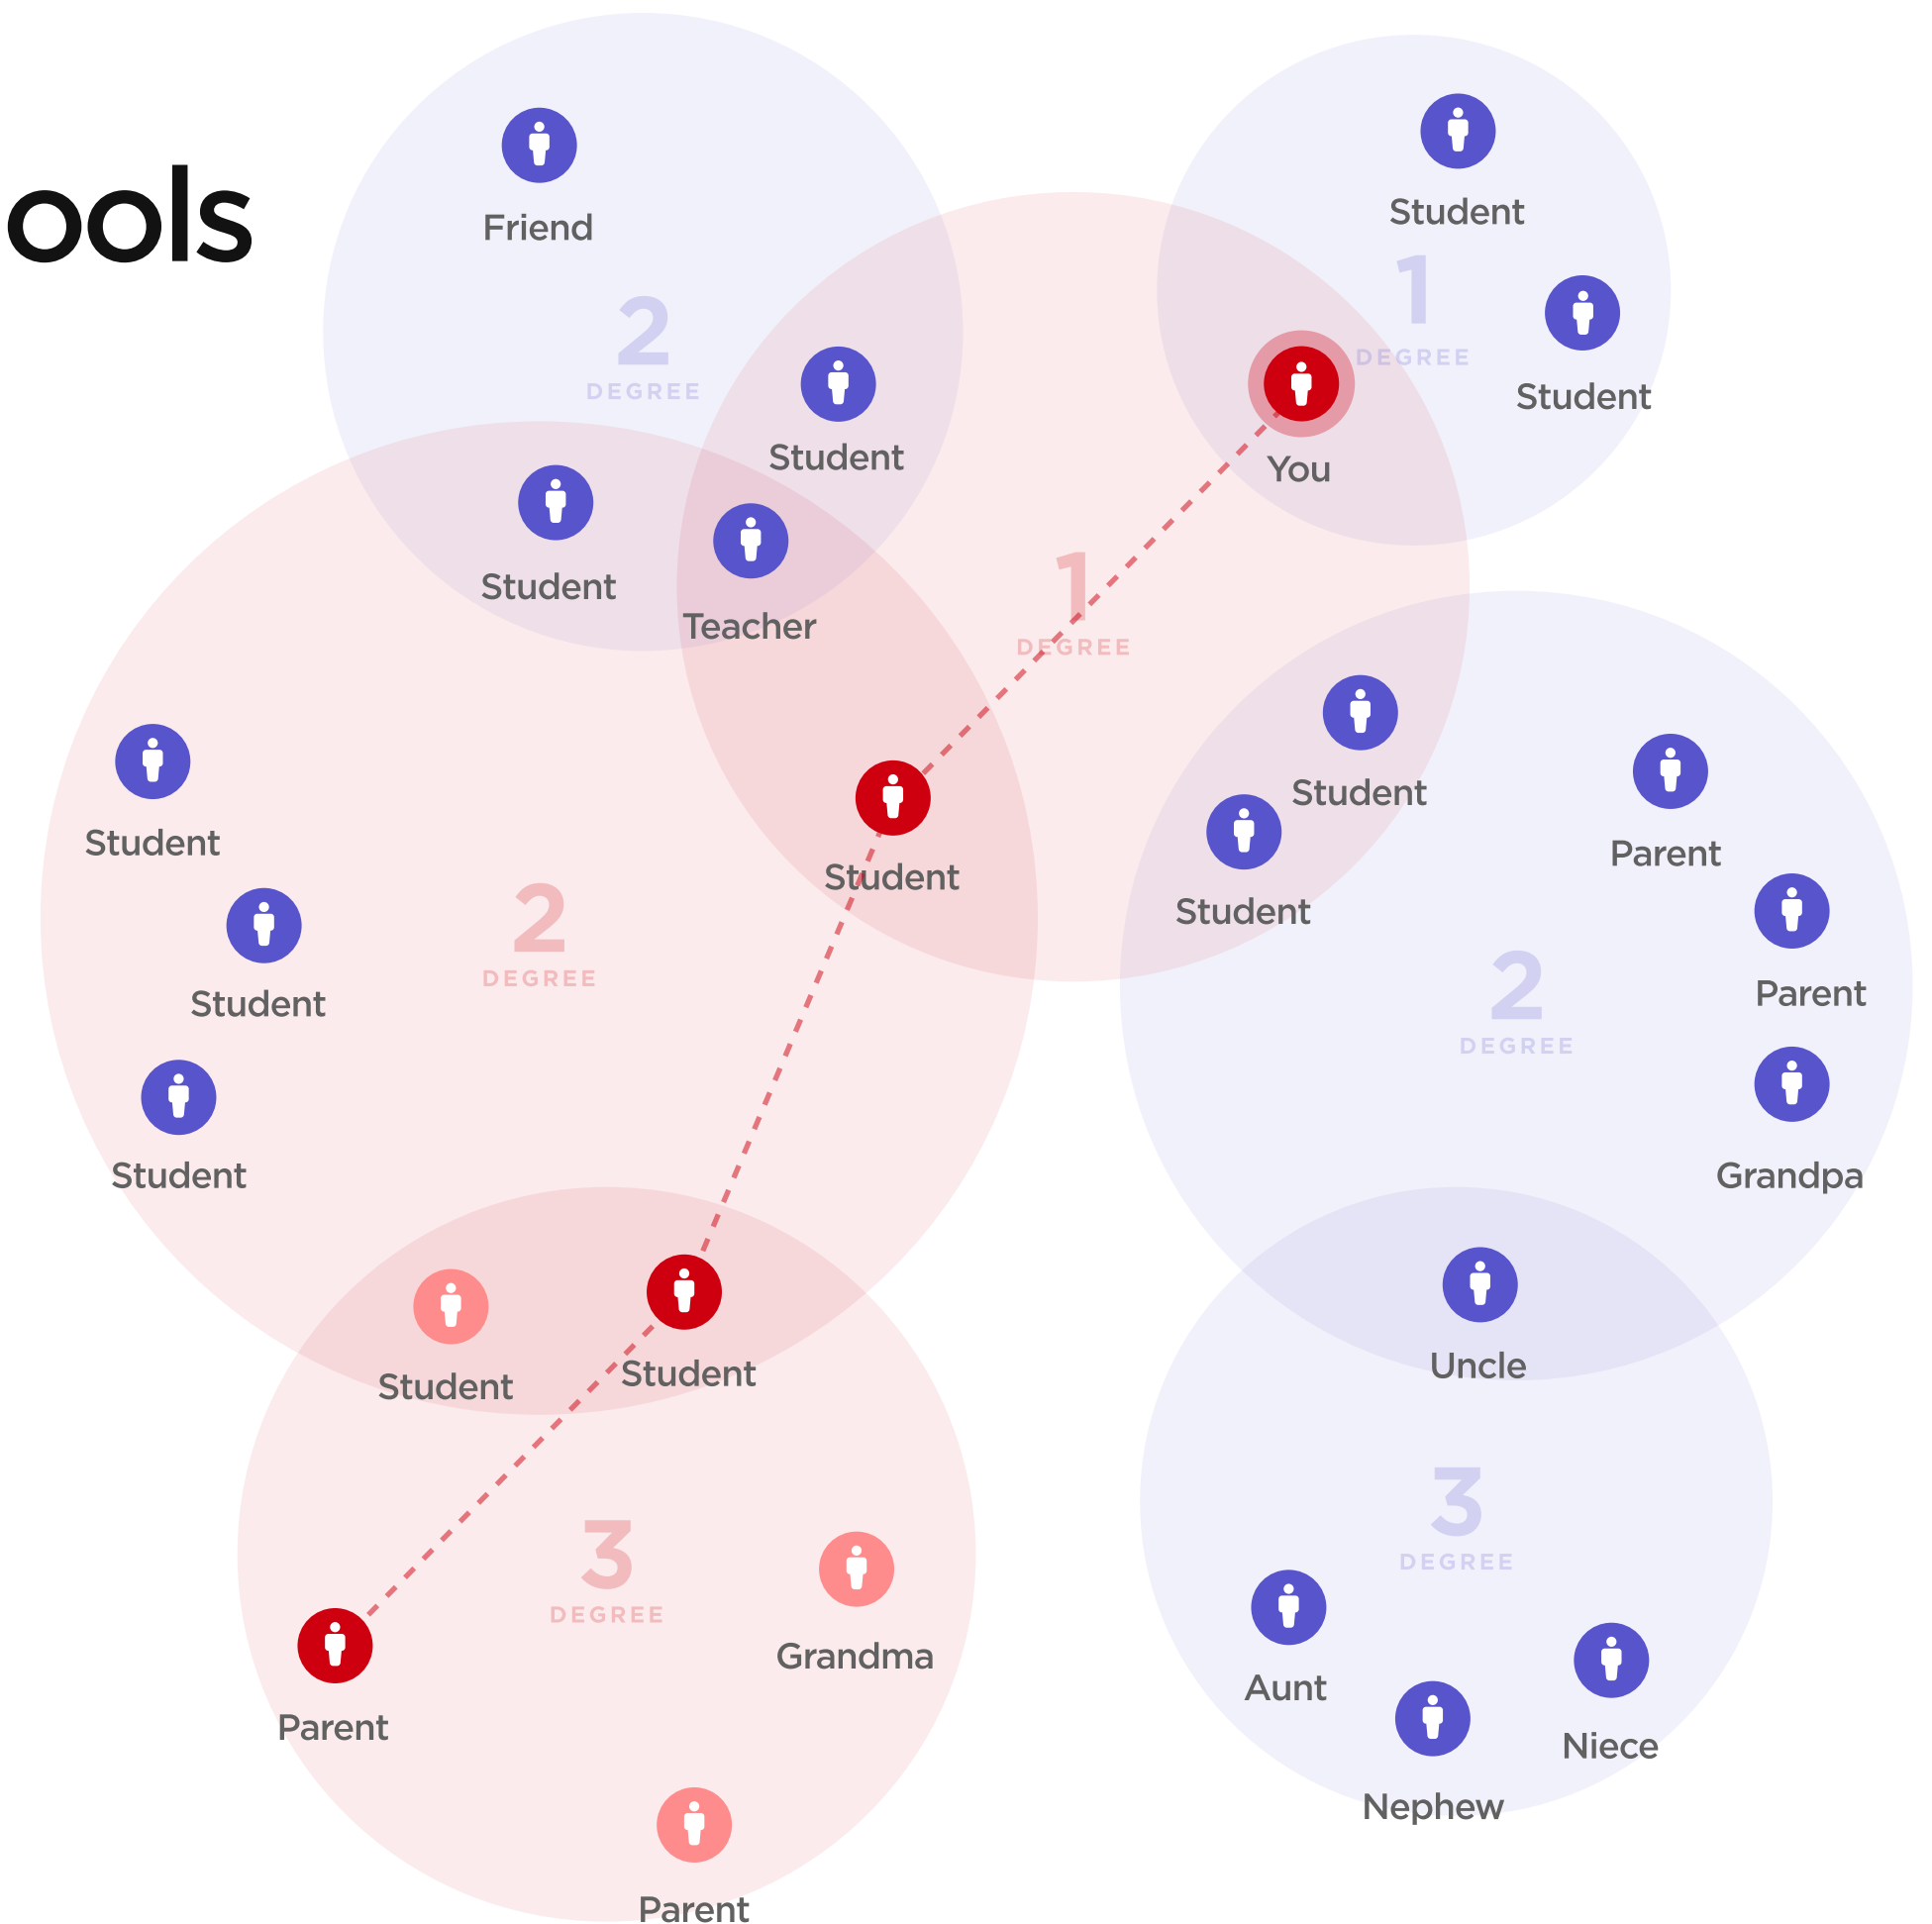

There's been a nationwide push for schools to reopen, **even though vaccines haven't been made widely available yet.**

2

Existing prevention methods are costly and require significant resources to enact. The time it takes to institute these prevention methods gives COVID-19 critical time to spread and mutate.

3

Other contact tracing apps alert a small number of users **after exposure**. This model of contact tracing cannot slow the spread of COVID-19.

How NOVID Can Help

Pre-Exposure Awareness: NOVID is the first **preventative** tool to fight COVID-19, visualizing cases up to 12 degrees of separation away. Get notified **before** exposure, to proactively avoid infection.

Anonymized Analytics: NOVID can provide school admins with analytics about **community spread**—all while **preserving anonymity**. Make informed decisions based on hard data.

Community Wide Adoption: NOVID is the only proactive platform that is designed to protect not only schools, but also their surrounding communities. Work with us to form a **protective bubble** around your community.

NOVID Radar

1

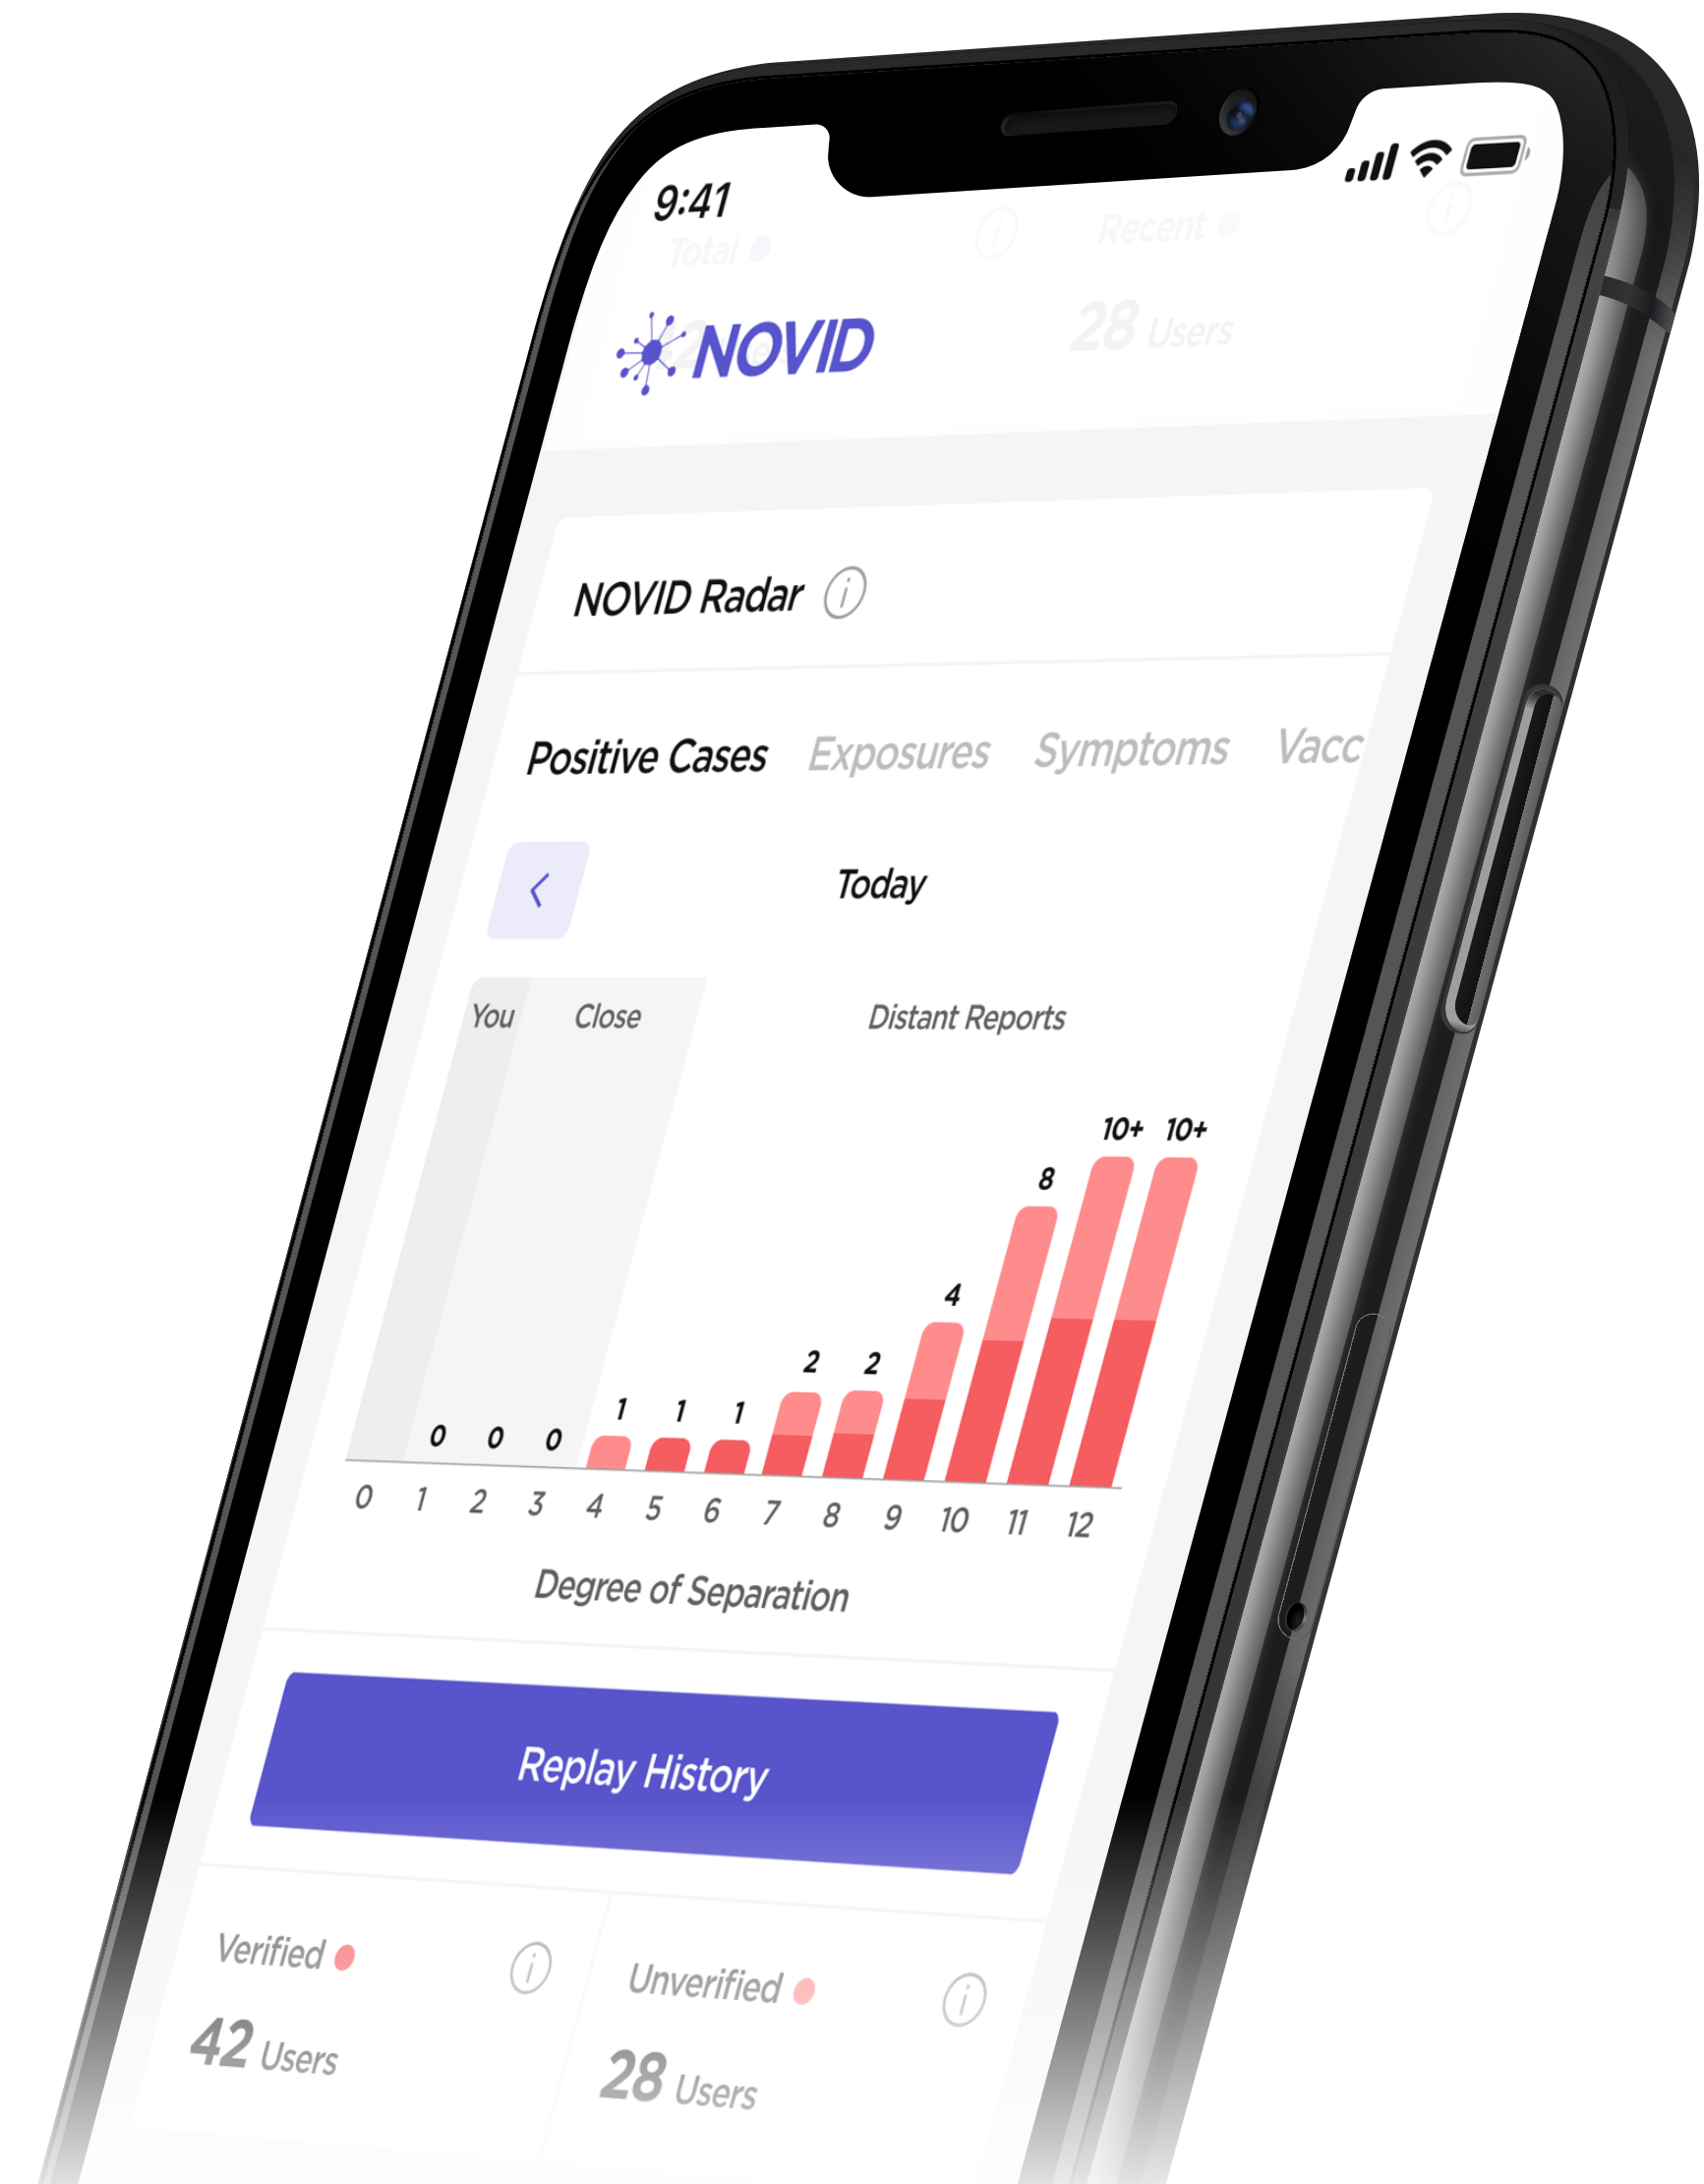

NOVID creates a paradigm shift by using network analysis to **make contact tracing predictive**. We show users how COVID-19 is approaching from far away.

2

This direct benefit to users **incentivizes widespread adoption** while only needing low rates of adoption to be informative.

3

Unlike traditional contact tracing, the early warning network is **useful for citizens even when there are few to no cases in their immediate vicinity**.

Community Dashboard

Batch Generate

Generate Positive Case Token ⓘ

If a person tests positive, you can give them a token so they can mark themselves positive in the app. This anonymously alerts users they are connected to.

Click to Create

Generate Close Contact Token ⓘ

If a person is exposed to a positive case, you can give them a token so they can mark themselves exposed in the app. This anonymously alerts users they are connected to.
